

# F.I.S.T. - Flatwoods Invasive Species Team

Do you enjoy gardening, wildflowers, hiking, hunting, bird watching, farming, or fishing? Did you know that there is an Invader in our natural areas that threatens to destroy your favorite hobby or livelihood? Invasive Plant species have vast negative impacts on all aspects of our natural resources and cause BILLIONS of dollars in damage each year. If you live in Jefferson, Scott, or Clark Counties then please join F.I.S.T. and help us fight back against the threat of invasive plants in your local area.

Purple loosestrife threatens our wetland areas.

Bradford Pear (aka Callery Pear) can escape your yard and take over our woodland areas.
